### What is oxycodone used for?

Oxycodone is commonly used to treat severe pain. Oxycodone may also be used for other conditions as determined by your health care provider.

### How does oxycodone work (mechanism of action)?

Oxycodone works to change how your body feels and responds to pain by binding to and activating specific receptors in your body.

### How should I store oxycodone?

Oxycodone should be stored at room temperature, between 68 F and 77 F (20 C and 25 C). It can be exposed to temperatures between 59 F and 86 F (15 C and 30 C) for shorter periods of time, such as when transporting it. Store in a cool, dry place. Protect from light and moisture.

### Side Effects

## What are the serious side effects of oxycodone?

While less common, the most serious side effects of oxycodone are described below, along with what to do if they happen. Severe Allergic Reactions. Oxycodone may cause allergic reactions, which can be serious. Stop taking oxycodone and get help right away if you have any of the following symptoms of a serious allergic reaction.

- Breathing problems or wheezing
- Racing heart
- Fever or general ill feeling
- Swollen lymph nodes
- Swelling of the face, lips, mouth, tongue, or throat
- Trouble swallowing or throat tightness
- Itching, skin rash, or pale red bumps on the skin called hives
- Nausea or vomiting
- Dizziness, feeling lightheaded, or fainting
- Stomach cramps
- Joint pain

Risk of Misuse and Addiction. Misusing oxycodone can lead to serious side effects, such as coma or death. Misuse means taking a medicine in a way other than how it was prescribed. Take oxycodone exactly as prescribed. Tell your health care provider if you feel that oxycodone is not working. Call your health care provider right away or go to the nearest emergency room if you have any of the following serious symptoms.
